About the ratings

EWG provides information on personal care product ingredients from the published scientific literature, to supplement incomplete data available from companies and the government. The ratings below indicate the relative level of concern posed by exposure to the ingredients in this product - not the product itself - compared to other product formulations. The ratings reflect potential health hazards but do not account for the level of exposure or individual susceptibility, factors which determine actual health risks, if any. July 15, 2015 Notice: In the coming weeks, EWG's Skin Deep® scoring methodology will undergo a slight change. Skin Deep® hazard scores will move to a 1 to 10 scale to be consistent with EWG's other consumer guides. After the change is implemented, all ingredients and products that currently score 0 will score 1. The remainder of the methodology and scores will remain the same. Please contact skindeep@ewg.org for any questions.
